

ABSTRACT OF DISCLOSURE

The present invention relates to a packing unit for a refrigerator having a detachable door handle, the packing unit comprising an outer case to protect an external appearance of the refrigerator, an upper shock absorber accommodated in the outer case and connected to an upper part of the refrigerator and formed with a handle accommodating part to accommodate the door handle detached from the refrigerator, and a lower shock absorber accommodated in the outer case and connected to a lower part of the refrigerator. An increase of a pack volume due to the door handle is prevented and the door handle is safely accommodated within an additional component the packing unit.
